

Titan SLN505-YL

The "locking function" is safe even when working on low floors.

In case of a crash, the strap will instantly stop the pull out so you can shorten the fall distance.

Winding power stop type.

When the strap is temporarily locked (stopped winding power), the drop distance will be longer by the amount of the strap sagging.

Easy switching between "2-way" function with a switch.

External hook connection ring included

Attach small hooks for lifting safety devices such as safety locks and S-slides. Combined with shock absorber coupling rings, the hook stands at an angle that is easy to hang.
